VOLVO OPTIMISED SERVICE PLAN

THE WINNING CONCEPT

Volvo Optimised Service Plan

Avoiding unnecessary stops

Success in the transport business means running your trucks with as few interruptions as possible. That requires reducing the number of planned service stops to a minimum.

With our free of charge Volvo Optimised Service Plan – VOSP – you can do just that. It's a service program tailored to your trucks and the way they're used.

With your input and our experience, your trucks will get the preventive maintenance they need, when they need it.

The Volvo Optimised Service Plan is the winning concept you need to succeed.

Service Alert System

No more guesswork. With the Service Alert System, you know when it is time to come in for service, based on the specific service plan for your truck.

We want to see less of you

By letting us help plan the service of your truck, you don't have to visit us as often. That means that you get more time to do what you do best. This is how it works.

We plan together

Your truck model and the unique assignments that it will be performing is the base of your tailored service plan. By giving us an estimate of the distances that will be covered, we can accurately estimate the service needs. When we create the service plan, the information given by you together with our expertise will ensure that your truck is maintained in the best fashion.

The next step is when the system calculates a complete Service Plan, showing what action needs to be taken during the entire duration of the service period.

The Service Plan will also state at exactly what mileages each action should be taken.

More uptime

Our Service Plan takes practical sense into consideration. That means that it optimizes your visits to us by grouping the different actions into fewer visits. For example, the plan will take into account that your vehicle may be out of operation during holidays or if there is a request for service at specific times. Should you change your driving conditions or the specification of your vehicle, you will receive a new service plan.

This can be done at any time – all changes and actions will be documented, contributing to the second-hand value of your truck. By setting up a Volvo Optimised Service Plan for your truck, you have taken the first step towards more carefree miles. The next step is taking out a Volvo Service Agreement.

Service planning – step by step

1 The right input

All relevant information about your truck is entered into the system. This includes exact specifications, how the truck will be used and the expected distances involved.

2 Identifying the best solution

Working together, we carefully consider various service intervals in order to identify the optimal level of maintenance for your truck.

3 Precise planning

Volvo Optimised Service Plan shows exactly when your truck needs a service and the actions that should be performed.

4 Fine-tuning your service

When your truck is with us, we can fine-tune the Service Plan if new data shows that this is necessary. This ensures optimised performance and operational economy.
